Turbine parts arriving at Mesalands

Courtesy Photo

Sections of a 1.5 Megawatt wind turbine for Mesalands Community College's wind technology program are arriving daily at the college's south 11th Street site. Most are often accompanied by escort vehicles with flashing lights signaling a wide load. The tower base unit is expected to be

installed today or Thursday, followed by the mid- and top sections on Saturday, according to the college's schedule. The blades and machine head arrived Monday. Each blade is about 121 feet long and weighs 13,889 pounds. For those who want to watch bleachers have been set up.
